JES3plus®

A Path to continue using the JES3 technology

We at Phoenix Software International are doing everything possible to make JES3plus the obvious choice for existing IBM JES3 customers. It's the easiest path. It's the least risky and most cost-effective option. Moving to JES3plus allows you to focus on your business objectives and not your infrastructure.

What should you expect?
- Functionally compatible with IBM JES3.
- A straightforward implementation – effort similar to upgrading to a new release of z/OS® JES3.
- Complete transparency with your user community.
- Pricing pledge – initial cost will closely match what customers are currently paying for JES3, with future pricing to remain aligned with IBM's pricing policy.
- Third-party software vendor support (view published list of vendors: https://www.phoenixsoftware.com/jes3plus_isv.htm).

"…Consequently, the JES3 to JES3plus migration went extremely smoothly and was on time which was not how I envisaged such a major migration."

Immediate Customer Benefits
- Full investment protection for all of the money, time and effort spent building a business around JES3 features and functions, thus fulfilling the promise of the value proposition of the mainframe.
- The operational and business risks associated with a JES2 conversion disappear.
- Customers use the time, human resources, and hard-dollar savings to focus on their business objectives and not their infrastructure.

What enhancements have we made?

Functional:	Performance:
• WLM batch initiator balancing • Dump Job (DJ) filtering • Enhanced operator commands • JCL job card passphrases • SMF 84 and IEFUSO enhancements • And more…	• SPOOL I/O now supports ACKD, zHPF, and PAV • This reduced channel utilization by >90% while running nearly twice as many jobs in a SPOOL-I/O-intensive benchmark

What does the future look like?
- Submit enhancement requests through our Secure Customer Portal
- JES3plus Customer Advisory Council (JCAC) assists in deciding business priorities

Training
JES3plus training is now available through Interskill Learning. Upon completion of the four-course curriculum, students will earn an IBM Authorized Digital Badge.
